MPO connector components

Overview

MPO connectors consist of male (with guide pins), female (with guide holes), and an adapter. Available in 8, 12, 16, 24, or 48 fibers, higher density models are also available. As traffic surges to 100G, 400G, and even 800G, single-fiber connectors like LC or SC struggle to keep up with density requirements. Enter the MPO (Multi-Fiber Push-On) connector. They are defined as an array connector with more than 2 fibers; they are available with 8, 12, 16, or 24 fibers for common data center applications. What is an MPO. Designed to unleash high-speed data center capabilities, MPO Cable Assemblies and Adapters use high-density MTP and MPO-style connectors to deliver streamlined connectivity, high port density, superior loss performance and simplified maintenance for the high-bandwidth networks of tomorrow.
