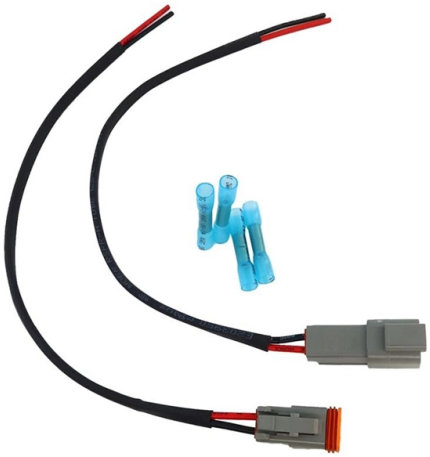
Tof structured light module



Overview

The camera uses an sToF system based on self-developed nanophotonic modulated projected light field, and integrates structured light and ToF depth reconstruction, which can complete close-range obstacle avoidance and long-range SLAM depth reconstruction with only a single. The camera uses an sToF system based on self-developed nanophotonic modulated projected light field, and integrates structured light and ToF depth reconstruction, which can complete close-range obstacle avoidance and long-range SLAM depth reconstruction with only a single. ToF cameras emit infrared (IR) light and measure the time it takes for the light to bounce back from objects. This time delay is converted into depth information to generate a 3D depth map of the scene. A digital camera along with a SitaraTM AM57xx System-on-Chip (SoC) is used to capture reflected light patterns from. This method works by projecting known patterns onto an object and analyzing the distortion of the reflected signal. The figure above depicts the concept of structured light. Advantages: Offers relatively higher spatial resolution with the use of off-the-shelf HD Color cameras and DLP projectors. This design. The Kinect is a depth camera launched by Microsoft, originally designed for its Xbox gaming platform to allow players to control games through body movements.

Understanding 3D Camera Technologies: Stereo Vision, Structured

In the rapidly evolving field of 3D imaging, three primary technologies stand out: Structured Light, Time-of-Flight (ToF) and Stereo Vision. Each offers unique advantages and is

3D Machine Vision Based on AM572x with DLP Structured Light

Pattern projection is performed by a structured light module in the DLP ALC SDK. The module generates vertical and horizontal gray-coded patterns or phase-shifted patterns which are sent to a

Stereo Vision vs. Structured Light vs. Time of Flight (ToF)

This article compares three 3D imaging technologies: Stereo Vision, Structured Light, and Time of Flight (ToF). It highlights the differences between them,

"Structured light + ToF" two-in-one 3D sensing module empowers

The camera uses an sToF system based on self-developed nanophotonic modulated projected light field, and integrates structured light and ToF depth reconstruction, which can

Understanding Depth Cameras: Structured Light, TOF, Stereo

This document introduces the working principles of depth cameras, explaining three common technologies—Structured Light, Time-of-Flight (TOF), and Stereo Vision—and comparing their

3D Depth Camera (Stereo, ToF, Structured-light) | LIPS

A full suite of 3D depth technologies — Active Stereo, Time-of-Flight, and Structured Light — enhanced with edge computing to enable robotics and factory automation.

TOF vs Structured Light: Principles, Trade-offs, and Application ...

In-depth comparison of ToF and Structured Light, two mainstream active 3D sensing technologies. Understand their differences in depth principles, accuracy, robustness, and application scenarios to

Structured Light vs. Time-of-Flight Cameras

Compare structured light vs ToF cameras in robotics, including accuracy, range, performance, and applications for depth sensing and real-time vision systems.

ToF vs Structured Light vs LiDAR: 3D Sensing

© 2026 PROMETHEAS OPTICAL - All rights reserved

Among the most widely used 3D vision solutions today are Time-of-Flight (ToF) cameras, Structured Light, and LiDAR. Each comes with distinct

Structured Light and TOF Sensors | Shengjun Zhang

Structured Light and Time-of-Flight (TOF) sensors are two advanced imaging technologies used in 3D surface modeling. Structured light sensors capture images by projecting a

Structured light | ams OSRAM

Structured light systems from ams OSRAM enable 3D imaging applications to achieve extremely high accuracy. Accurate structured light technology is behind the user face recognition being implemented

"Structured light + ToF" two-in-one 3D sensing module empowers

Reference address "Structured light + ToF" two-in-one 3D sensing module empowers robots with a new "vision" Disclaimer: The content and accompanying images of this article were

Overview of modulation techniques for spatially structured-light 3D ...

The modulation and projection of spatially structured-light patterns is a crucial problem in structured-light 3D imaging. Previously, researchers have used laser interference to produce fringe

Accuracy Analysis of ToF and Structured Light with Different Baseline ...

In addition, the experiment also tests the influence of reflectivity and MPI effect on the measurement accuracy of ToF. The paper can provide useful reference for the selection and design

Combination of Spatially-Modulated ToF and Structured Light for MPI ...

In this work we extend this approach by applying a Structured Light (SL) technique on the same projected patterns. This allows to compute two depth maps with a single ToF acquisition, one with

3 Common Types of 3D Sensors: Stereo, Structured

Over the past decade, 3D sensors have emerged to become one of the most versatile and ubiquitous types of sensor used in robotics.

Structured Cabling Solutions

ICC is a structured cabling solutions manufacturer of copper & fiber optic connectivity products for commercial & residential applications.

Capturing depth: structured light, time of flight, and the
